

## PREPARING FOR INSTALLATION

Carefully remove all contents from the carton. Shut off the power at the circuit breaker and completely remove the old fixture from the ceiling, including the old mounting bracket. Remove the new mounting bracket assembly from the bag. Remove cap nuts (F) from mounting screws (B). Place the mounting plate (A) over the junction box so that mounting screws (B) and nuts (G) extend out away from the ceiling. Depending on the placement of your junction box the position of mounting screws (B) may need to be adjusted to allow the canopy to be flush with the ceiling. Adjust the position of mounting screws (B) so that mounting screws (B) can be exposed 5–6 mm after passing through the canopy (E) to properly fit the cap nuts. Mounting screws (B) can be adjusted by loosening nuts (G) and loosening or tightening mounting screws (B). Once the ideal position of mounting screws (B) has been confirmed, tighten nuts (G) on mounting screws (B) under the mounting plate to ensure that mounting screws (B) are in place. Pull the house wires through the center of mounting plate (A). Secure mounting plate (A) to the junction box by tightening the screws (C).

## ASSEMBLING THE FIXTURE

Each light fixture consists of three 12-inch stems (L), one 6-inch stem (M), one 12-inch chain (I), and two quick-connect links. Determine the correct number of stems and chain links needed for proper hanging height. To lengthen the fixture, add additional stems. To shorten the fixture, trim the wires to desired length. Leave at least 8 to 10 inches of wire in addition to the desired length and slide any excess stems off the fixture's wiring to discard. If necessary, use a pair of pliers to open and remove any excess chain. Attach one quick-connect link (J) to each end of chain (I). Thread the wires through the stems and pull the wires until taut before connecting the stems together. All threads should be engaged but do not overtighten (some manual straightening of the stems may be required). Screw bottom stem onto threaded post (N) on the fixture. Thread the wires through hanging ring (K) and screw to the top stem. Use one quick-connect link (J) to attach chain (I) to hanging ring (K) and securely close. Feed the fixture wires up through the chain (every three links or so) pulling the wires until taut. Thread the wires through the hanging ring (H) on canopy (E). Use the remaining quick-connect link (J) to attach the chain to the hanging ring (H).

## CONNECTING THE WIRES

Have a helper support the fixture's weight while completing the wiring. Attach the fixture's wires to the power supply wires from the junction box. Connect black to black (live); white to white (neutral); grounding to grounding (green or copper). Twist the ends of the wire pairs together then twist on a wire connector. Make sure all twists are in the same direction. Loop fixture's ground wire around grounding screw (D) and tighten. If there is no ground wire (green or copper) from the junction box, contact a qualified electrician.

## FINISHING THE INSTALLATION

Raise canopy (E) to mounting plate (A) and position mounting screws (B) so that they protrude through the openings of canopy (E). Secure canopy (E) in place with cap nuts (F). Install light bulb (not included) in accordance with the fixture's specifications. Do not exceed the recommended wattage. Your installation is now complete. Turn on the power and test the fixture.

## CLEANING TIPS

Treat the fixture gently! Regular cleaning will reduce the need for deep cleaning. For regular cleaning, turn off the light and wipe down the fixture with a clean lint-free cotton or microfiber cloth. Never spray cleaner directly onto the fixture.

### Hunter Pro Tip:

Let the tool do the work! Use chain pliers to easily open and close chain links to shorten your fixture.

### NOTICE

In order to use a 12in. stem by itself you must first remove the threaded post from the 6in. stem and install it on one of the ends of the 12in. stem.

### Hunter Pro Tip:

Twist or tape wire ends together to make it easier to pass them through the downrods. Threaded post may also be removed for easier wire access.

## INSTALLATION INSTRUCTIONS INSTRUCCIONES DE INSTALACIÓN/ INSTRUCTIONS D'INSTALLATION

**WARNING**

- To avoid possible electrical shock, before installing your light fixture, disconnect the power by turning off the circuit breakers to the outlet box associated with the wall switch location.
- The lighting fixture must be grounded. If the ground wire for the installation site is not present, immediately STOP installation and consult a qualified electrician.
- All wiring must be in accordance with national and local electrical codes ANSI/NFPA 70. If you are unfamiliar with wiring or in doubt, consult a qualified electrician.

**READ AND SAVE THESE INSTRUCTIONS**  
These instructions are provided for your safety. It is very important that they are read carefully and completely before beginning installation of the lighting fixture.

**ADVERTENCIA**

- Para evitar una posible descarga eléctrica, antes de instalar su lámpara, desconecte la energía apagando los interruptores automáticos (breakers) que alimentan la caja de salida asociada con la ubicación del interruptor de pared.
- La lámpara se debe conectar a tierra. Si el alambre de conexión a tierra no está presente en el sitio de la instalación, **DETENGA** inmediatamente la instalación y consulte con un electricista calificado.
- Todo el cableado debe realizarse de acuerdo con los códigos eléctricos locales y nacionales ANSI/NFPA 70. Si no está familiarizado con el cableado, o si tiene duda, consulte a un electricista calificado.

**LEA Y GUARDE ESTAS INSTRUCCIONES**  
Estas instrucciones se proporcionan para su seguridad. Es muy importante leerlas detenidamente y completamente antes de comenzar la instalación de la lámpara.

**AVERTISSEMENT**

- Pour éviter tout choc électrique, avant d'installer le luminaire, coupez le courant et éteignez les disjoncteurs de la boîte électrique associée à l'interrupteur mural.
- Le luminaire doit être mis à la terre. Si le fil de terre du lieu d'installation n'est pas présent, **ARRÊTER** immédiatement l'installation et consulter un électricien qualifié.
- Tout le câblage doit être conforme aux codes électriques nationaux et locaux en vigueur et à la norme ANSI/NFPA 70. Si vous n'avez pas l'habitude de faire ce câblage ou en cas de doute, adressez-vous à un électricien qualifié.

**LISEZ ET CONSERVEZ CES INSTRUCTIONS**  
Ces instructions sont fournies pour votre sécurité. Il est très important de les lire attentivement dans leur intégralité avant d'entreprendre l'installation du luminaire.
